WATER PUMP KIT · HOW TO USE

Running water with no supply, in 5 steps

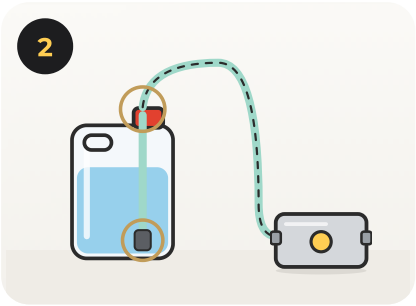

The kit brings running water to the sink where there is no water supply. One tank supplies clean water, the second collects the waste water.

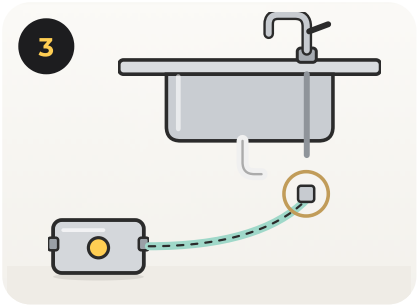

Fill

Fill the first tank with clean water. Place both tanks under the sink.

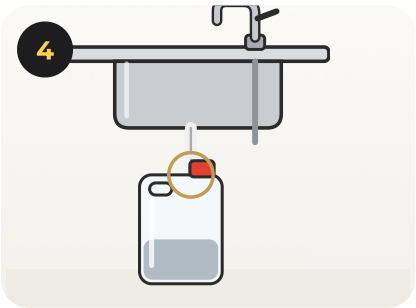

Draw

Put the suction hose with filter into the clean water tank and screw on the connector cap.

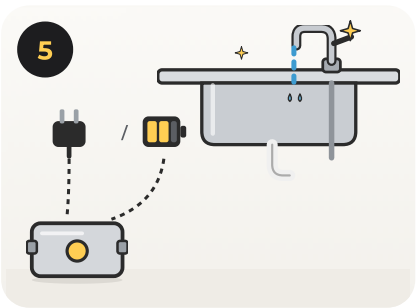

Connect

Screw the pump hose onto the tap's flexible hose. The fittings are stainless steel.

Waste

Route the sink drain into the second tank. Nothing ends up on the floor.

Switch on

Plug the transformer into a socket or connect the battery. Open the tap: the water runs.

TWO VERSIONS

Transformer with plug
where there is a socket

Battery kit
no socket, no cables

- **2 tanks of 10 litres**, clean and waste
- **2 m of hose**, wire reinforced
- **Suction filter**, stainless steel fittings
